Assignment - 1

Name : S. Poornamathi

Regno : 21ITR085

Class : 21IT5B

Subject : Virtualization

Sub. Date : 25.07.23

Steps to create Virtual Machine using Virtual Box

1- Let Into the chrome and download the Source Code of Virtual Box. It's name is vc-redist.

2- After Successfull download, download the Virtual Box. The name is virtual Box -7.0.08. it is the Type-2 (Hosted Hypervisor) Hypervisor

3- Allow virtual box to change the machiene

4- Virtual Box -7.0.8 contains the following virtual box application

        Virtual Box   USB   support

        virtual Box   Network   support

                virtual Box Bridged network

                virtual Box Host only network

        virtual Box Python support

5- By double click the downloaded source code it will install in the system

6- After The virtual Box application want to download by double clicking it.

7- Read all the data's shown in the popup menu and accept The terms then Click next.

8 - Finally the virtual Box is created in our machiene.

9 - Open The downloaded virtual Box application and click new gaue a name and note the path.

10 - on The third slide of this we want to adjust our memory storage for our virtual machiene.

11 - Finally it shown as a summary and our virtual machiene is created with storage capacity.

12 - We get into files → Tools → Virtual Media Manager for trying to Increase or shrink the storage

13 - In this Virtual Box we can't shrink our initially given allocation but we can increase our space in our virtual machiene
